**Wagenborg Nedlift - The art of heavy transport**

## Introduction

Wagenborg Nedlift offers a broad spectrum of transport services: from single flatbed loads to complex, multi-mode transport projects. We operate throughout Europe from our offices in the Netherlands, Germany and Spain. We have clients in various lines of business, such as the oil and gas industry, the (petro)chemical industry and the energy sector.

## Flatbed Transport

The main activities of our flatbed transport department consist of regular project loads such as machinery, skids and boilers. The department also handles frequent trips with building materials, consumables or components for overhaul and maintenance projects. With the help of truck-mounted cranes we can unload these at the construction site. These regular loads, transported within the Netherlands and to all possible destinations in Europe, form the base of our European network. This European network has a sound North-South connection, extending from Scandinavia to Spain and Portugal.

## Specialised Transport

Our specialists at the special transport department are ready for any challenge when the equipment you need to move has unusually large dimensions. A wind turbine component of 35 metres long, a 50-tonne prefabricated concrete beam and a 20-metre high storage tank: these are just some examples of the special transport jobs that Wagenborg Nedlift regularly performs. With special transport projects, thorough preparation is essential. Wagenborg Nedlift's employees are completely familiar with every aspect of this. They take care of:

- carrying out route surveys
- transport engineering
- job preparation
- acquisition and provision of permits and documents
- transport supervision
- drawing up operating manuals
- project management

## Factory to Foundation Projects

Road transport is only a part of the logistic package Wagenborg can offer. We are also the right partner for Factory to Foundation projects, using a combination of road transport, inland waterways and sea transport. As part of the Royal Wagenborg Group, we utilise the expertise of our fellow operating companies, which specialise in shipping, storage, transshipment, tugboat services and project logistics. In this way, we can perform the entire operation under the same

flag. This means that you, as the client, can leave it to us to take care of all the logistics for your project, including the related risks. You can settle all the logistics with one point of contact, leaving you free to concentrate on your own business.

## Wide Variety of Modern Equipment

Our modern and versatile equipment fleet, consisting of over 80 trucks and 120 towed units, is at your disposal. For every transport job, we have the right equipment; this means that we can always offer you the best and most economic transport solution. The Wagenborg Nedlift fleet consists of:

- Rigid trucks with crane till 60 meter
- Flatbed trailers
- Semi low loaders
- Euro low loaders
- 3-bed-4 combinations
- Truck-mounted cranes up to 70 t capacity

## Skills and experience

For a perfect performance, you need more than just the right equipment. The success of your project strongly depends on the people involved. The employees of Wagenborg Nedlift are well trained and have the right qualifications. Above all, they are experienced and committed people who are proactively involved in the process. Our operational staff are supported by experienced, professional engineers and project managers. Together, they take care of efficient transport and safe arrival of your valuable equipment.
