## Project engineering

Transporting unusual objects very often calls for unusual solutions. Our project engineers will rise to any challenge drawing on their potential for innovation. Creative solutions are carefully reviewed and then discussed with you. In support of project management, our project engineers prepare reliable progress assessments and perform route surveys. CAD systems are used to draw up lifting, transport and stowage plans. Together, this results into a fine execution plan including a project-specific quality plan. Last but not least: an in-depth safety and risk assessment of the work to be performed is carried out, for which our staff can draw on more than 150 years' experience in unusual transport and lifting.

## Expert knowledge and experience

Wagenborg Nedlift has a wide range of materials it can deploy in the horizontal and vertical movement of objects. But it is not good tools that produce good service. It is the people using them. They are what makes your project a success. Wagenborg Nedlift's staff are highly skilled and have all the required qualifications. But first and foremost they are experienced, committed professionals who do not just carry out but actively contribute to every process and project in which they are involved. Our operational staff team up with our specialised, experienced engineers and project managers to ensure safe and efficient delivery of your transport project.

## Project management

Any successful logistics project starts out with sound preparation. At Wagenborg Nedlift an knowledgeable, experienced team of engineers, project managers and project groundwork specialists will prepare your project down to the last detail.

This way you will be informed in advance of the costs and work method involved in transporting and placing your object(s). Our project leader will provide professional, expert supervision for your project and act as your focal point for any matters that might arise, until it is completed. The result? Safe and efficient project delivery, on time.
